Instruction of How to Clear Secure Code

You can ONLY clear Secure Code while Cold Start.

1) Hold down key <A>, and then switch on the power supply, (or press the reset button).

2) Release the key after about 3 seconds, and the cold start screen will be shown as below:-

MAST CARD	ENG. CARD	CARD TYPE	DISP TYPE

3) Please do setup as usual, such as Master Card and etc.

4) Press <#> key from the main screen, and the display will show the remaining 4 commands of the set up menu, that is:-

EL2K Mod	Con Swip	Crd Siz	clr sec

5) Press <D> key in order to clear the secure code. The display will show:-

PC Serial Code	
Clear	No

6) Press <D> key to select <YES>, ending with <#> key to return to the main menu screen.

7) After finishing the above set-up, you should press <*> key from the main screen to exit.

8) The date/time should appear on the LCD and the red light on the reader should begin to flash.

9) Open software EdotWin or WinPro and make sure the communication is working fine.
